MOTORCYCLE PARTS

Da un anno è ormai operativa la nuova sede **RMS** di Seregno in cui sono state unite le tre divisioni commerciali:

- **RMS Motorcycle Parts** per l'after market Scooter
- **RMS Components Selection** per l'after market ciclo
- **RMS OEM Bicycle Section** per la fornitura al primo equipaggiamento

La nuova organizzazione, i nuovi spazi e la moderna logistica hanno permesso il raggiungimento di livelli di eccellenza nel servizio offerto da **RMS** ai propri clienti.

RMS opera ora su uno spazio complessivo di 24.000 metri quadrati che permettono un'ottimale organizzazione del ricevimento e dello smistamento delle merci.
I 14.000 metri quadrati coperti, su due livelli garantiscono la gestione di 18.000 posti pallet dove trovano posto le oltre 7000 referenze dei marchi rappresentati.
Ribalte meccanizzate, armadi automatici per la gestione della minuteria, muletti ad alta velocità ed un sistema di gestione centralizzato, collegato in modalità wireless ai terminali, rendono possibile una gestione ottimale del processo di ricevimento ed evasione dell'ordine.

RMS lavora a stertto contatto con agenti e distributori presenti su tutto il territorio nazionale con l'obbiettivo di fornire massima disponibilità e supporto ai propri clienti.

MATERIALE ELETTRICO

ELECTRIC PARTS

CONSIGLI PER IL CORRETTO UTILIZZO E LA RICARICA DELLE BATTERIE

CONSIGLI GENERALI DI UTILIZZO:

Controllare periodicamente la tensione della batteria ed il livello dell'eletrolita.
Nelle batterie al piombo tradizionali accertarsi che il livello dell'elettrolita non scenda al di sotto del livello "UPPER LEVEL" indicato sulla batteria ed eventualmente ripristinarlo con acqua distillata.
Controllare la pulizia e lo stato dei morsetti pulendoli ed applicando del grasso per proteggerli dalla corrosione.

Le principali cause di deterioramento della batteria sono:
- Forti vibrazioni
- Caldo eccessivo
- livello basso dell'elettrolita con piastre scoperte (si ossidano)
- abbassamenti continui sotto un certo livello del voltaggio nominale (soste prolungate senza l'utilizzo un mantenitore).

Nel caso in cui il veicolo non venga utilizzato per un tempo superiore ad un mese
è necessario verificare che il voltaggio della batteria non scenda al di sotto dei 12V.
Se il voltaggio scendesse sotto tale limite è necessario ricaricare la batteria.
Al di sotto dei 12V, infatti, si innestano processi di solfatazione delle piastre che impediscono la generazione di tensione all'interno della batteria.

STOCCAGGIO:

Conservare le batterie in un ambiente asciutto ed evitare elevati sbalzi termici.
Le batterie già cariche (tipo ermetico) vanno ricaricate almeno ogni 6 mesi.

TIPOLOGIE DI BATTERIE:

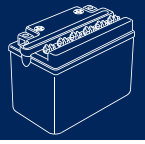

1. Tradizionali, ad acido libero (per esempio YB4L-B).

2. Sigillate (a bassa manutenzione) (per esempio YTX9-BS).
   Tali batterie sono fornite con acido a corredo.
   Una volta applicata, la fascetta di chiusura non deve più essere rimossa per non compromettere la tenuta e la durata.

3. Ermetiche, con acido (per esempio YTZ10-S).
   Tali batterie vengono fornite sigillate e precaricate.
